

Material: Polypropylene

Thickness: 50 μm CHEMICAL COMPATIBILITY CHART

|                                | Compatibility | Remarks                          |
|--------------------------------|---------------|----------------------------------|
| Water                          | Good          |                                  |
| Aqueous solutions              | Good          |                                  |
| Dr. Stamm Tickopur: TR13, TR14 | Good          |                                  |
| Acetone                        | Good          |                                  |
| Isopropanol                    | Good          |                                  |
| Ethanol                        | Good          |                                  |
| Formamide                      | Good          |                                  |
| Sunflower oil                  | Moderate      | Oil seems to be released slowly? |
| Dr. Stamm: TR13, TR14          | Good          |                                  |
| PBS                            | Good          |                                  |
| Methylester lauric acid        | Good          |                                  |
| Propylene carbonate            | Good          |                                  |
| Bonderite C-MC 21130           | Good          |                                  |
|                                |               |                                  |
|                                |               |                                  |
|                                |               |                                  |
|                                |               |                                  |
|                                |               |                                  |
|                                |               |                                  |
|                                |               |                                  |
|                                |               |                                  |
|                                |               |                                  |
